

# Exploring Astrology in 5 Easy Steps

*Let the Stars be Your Guide*

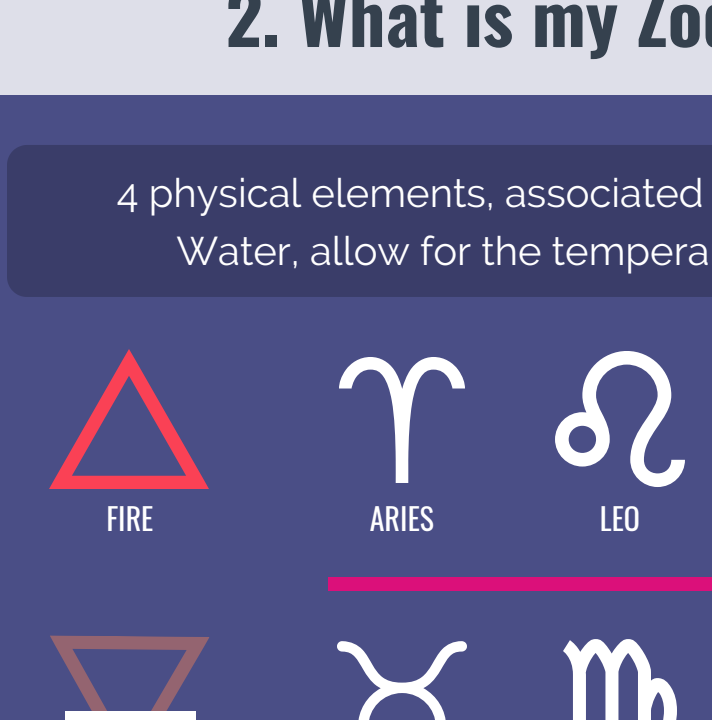

In astrology, 4 characteristics are connected to each zodiac sign: an element, a planet, a modality, and a house. This is known as zodiac characterization. By combining all of them, you can draw up a precise portrait of the sign. Follow the below 5 steps to find out about your astrology profile.

## 1. What is my zodiac sign?

The month you are born in defines your zodiac sign. Your zodiac sign follows the Sun and it is based upon the Sun's yearly rotation. The Sun moves into a new zodiac sign approximately every month, anywhere between 19th and 23rd. However, our monthly calendar does not precisely follow the celestial month, around the Earth. That is why we have a leap year.

Each zodiac sign represents a 30-degree section of space, starting from Aries. This is a math calculation related to our yearly seasons.

The group of dates between the 19th and 23rd of a month is called a cusp. This is the period in which the Sun may change sign. For example, if you were born between the 19th and 23rd of January- the exact position of the Sun at the time of your birth will define your sign, Capricorn or Aquarius.

## 2. What is my Zodiac sign's Element?

4 physical elements, associated with zodiac signs. \*Fire – Earth – Air – Water, allow for the temperament of the sign to be established:

				Energy, liveliness, dynamism, need for domination, transformation, creation
				Stability, fixation, concentration, resistance, determination, austerity
				Growth, connection, exchanges, need for renewal, mobility and diffusion
				Instinct, subconscious, memory, capacity for emotion, relaxation, receptiveness, flexibility, availability

\*Established by Empedocles (c. 490-c. 420 BC)

## 3. What is my Zodiac sign's modality?

The notion of CARDINAL, FIXED and MUTABLE qualities (depending on whether the sign begins, develops or ends the season), associated to the zodiac signs, allow for the MODALITY (energy) of the sign to be determined.

					Desire for movement, for moving forwards
					Desire for realization, balance
					Desire for change

## 4. What is my Zodiac sign's planet?

The planet associated to your zodiac sign defines the domicile of your sign in the cosmos. Depending on your astrological sign, you're governed by one or more dominant planets. Each planet emits specific vibrations that influence all the signs it is connected to in different ways. Thanks to the planets, we know your character and your tendencies.

									God of War and combat Goddess of Love, beauty and fertility God of trade and travel
									Knowledge and intuition Source of light, heat and life God of gods, light and justice God of agriculture and time

## 5. What is my Zodiac sign's House?

Based on Greek thinking, which divides human psychology into 12 sectors of life, the zodiac has 12 areas of existence. These are calculated based on the ascendant of the sign. These are called the 12 houses of the zodiac; Thanks to the houses, we know which areas of life you express yourself most in.

						Vital force: The world of self, potential of physical forces and their latent powers Stability and sense of ownership Spirit and adaptation
						Gestation, sensitivity and inner life Radiation and autonomy Reason and self-control
						Harmony and Justice Destruction and renewal Unification of tendencies
						Mastery and inner ambition Altruism Communion with other men and sacrifice
